

iMovie

iMovie is the video editor of choice for many Mac users. It's an inexpensive app that offers the basic tools you need to make a great family film, wedding video, or YouTube clip. But iMovie also includes features you see in more high-end applications, such as transitions, image stabilization, and even green-screen effects.

Who should attend

- Anyone with basic Mac skills that wants to do video editing

What you will learn

- Know how to get your footage into iMovie, from a camera or your hard drive, and navigate around the interface.
- An overview of the entire editing process
- fine-tuning clips
- adjusting color
- adding titles and music
- transitioning from one clip to the next
- creating slo-mo video
- how to export your movies
